Building Information - Cuyahoga Falls City (43836) - Silver Lake Elementary

Program Type	Classroom Facilities Assistance Program (CFAP) - Regular
Setting	Suburban
Assessment Name	Silver_Lake_ES_June_2009_Jan_2015_EEA_June_2018_Desktop_Update
Assessment Date (on-site; non-EEA)	2015-01-06
Kitchen Type	Warming Kitchen
Cost Set:	2018
Building Name	Silver Lake Elementary
Building IRN	34603
Building Address	2970 Overlook Road
Building City	Cuyahoga Falls
Building Zipcode	44224
Building Phone	(330) 920-3632
Acreage	7.50
Current Grades:	K-5
Teaching Stations	20
Number of Floors	2
Student Capacity	301
Current Enrollment	251
Enrollment Date	2009-04-15
Enrollment Date is the date in which the o	current enrollment was taken.
Number of Classrooms	14
Historical Register	NO
Building's Principal	Ms. Rachael Seifert
Building Type	Elementary

GENERAL DESCRIPTION

37,606 Total Existing Square Footage 1927,1946,1950,1956 Building Dates K-5 Grades 251 Current Enrollment 20 Teaching Stations 7.50 Site Acreage

Silver Lake Elementary School, which is not on the National Register of Historic Buildings, and originally constructed in 1927, is a two story, 37,606 square foot brick and stone school building located in a suburban residential setting. The existing facility features a conventionally partitioned design, and does not utilize modular buildings. The structure of the overall facility contains a brick veneer with stone and painted wood trim accents on a masonry bearing wall type exterior wall construction, with glazed block, plaster, and wood paneling type wall construction in the interior. The first and second floor system of the overall facility consists of precast concrete planks with concrete topping type construction. The roof structure of the 1927 Original Construction is wood deck on wood rafter type construction. The roof structure of the 1927 Original Construction is a combination of a fully adhered EPDM roof over the entry portico, asphalt shingles on the sloped areas, and asphalt built-up roof with gravel wear coat over the flat areas that were installed in 1999. The roofing system of the 1926 Additions is an asphalt built-up roof with gravel wear coat that was installed in 1999. The ventilation system of the building is adequate to meet the needs of the users. The Classrooms are undersized in terms of the current standards established by the State of Ohio. Physical Education and Student Dining spaces consist of one Gymnasium and separate Student Dining. The electrical system for the facility is inadequate. The facility is equipped with a non-compliant security system. The building has a non-compliant automatic and manual fire alarm system. The facility requirements. The school is located on a 7.5 acre site adjacent to residential properties. The property, playgrounds, and play areas are not fenced for security. Access onto the site is unrestricted. Site circulation is good to fair. There is no dedicated space for school buses to load and unload on the site. Parking for staff, visitors and community even

A. Heating System

The existing system for the 1927 Original Construction is a natural gas fired steam boiler type system, installed in 1927, and is in fair to poor Description: condition. The systems in the 1946, 1950, and 1956 Additions are an extension of that found in the 1951 Original Construction. 2-pipe vs. 4-pipe designations are not applicable in this facility, as no central air conditioning is provided. The two (2) cast iron boilers, manufactured by Peerless, were installed in 1999 and are in fair condition. Steam is distributed to terminal units consisting of unit ventilators, cabinet heaters, unit heaters, air handlers, radiators. The terminal equipment is original to each addition and is in fair to poor condition. The system does not comply with the 15 CFM per person fresh air requirements of the Ohio Building Code mechanical code and Ohio School Design Manual. The pneumatic type system temperature controls are original to each addition with incremental upgrades and are in fair condition. The system does not feature individual temperature controls in all spaces required by the OSDM. The overall system does not feature any central energy recovery systems. The facility is not equipped with louvered interior doors to facilitate Corridor utilization as return air plenums. The existing system in the Gymnasium is ducted, but the ductwork cannot be integrated into a possible future system due to arrangement, air volume, and routing of existing ductwork. The existing system in the remainder of the overall facility is not ducted, except for the Basement, and floor to structural deck heights will accommodate the installation of properly sized ductwork for a future Ohio School Design Manual approved system. The existing system in the Basement is not ducted, but floor to structural deck heights will not accommodate the installation of properly sized ductwork for a future Ohio School Design Manual approved system. The overall heating system is evaluated as not being in safe and efficient working order, and long term life expectancy of the existing system is not anticipated. The structure is not equipped with a central air conditioning system. The site does not contain underground fuel tanks.

Rating: 3 Needs Replacement

Recommendations:

Provide new overall heating, ventilating, and air conditioning system to achieve compliance with Ohio Building Code and Ohio School Design Manual standards. Convert the overall facility, except for the Gymnasium to a ducted system to facilitate efficient exchange of conditioned air. Replace existing ductwork in the remainder of the overall facility to facilitate efficient exchange of conditioned air with pricing included in conversion to ducted system replacement. Provide architectural soffits in the Basement of the facility to accommodate the installation of ductwork, with funding provided in conversion to ducted system replacement.

Sum:			\$1,283,116.72	\$568,132.12	\$410,361.24	\$46,539.68	\$258,083.68		

Natural Gas Fired Steam Boilers

Steam Radiators

B. Roofing

Description: The roof over the 1927 Original Construction is a combination of a fully adhered EPDM roof over the entry portico, asphalt shingles on the sloped areas, and asphalt built-up roof with gravel wear coat system over the flat areas that was installed in 1999, and is in fair condition. The roof over the 1946, 1950, and 1956 Additions is an asphalt built-up roof with gravel wear coat system that was installed in 1999, and is in fair condition. There are no District reports of current leaking. Signs of past leaking were observed during the physical assessment. Access to the roof was gained by access roof hatch with access ladder and exterior access ladders that are in fair to poor condition. Fall safety protection cages are not required, and are not provided. There were observations of standing water on the roof. Metal and clay tile cap flashings and stone copings are in fair to poor condition. Roof storm drainage for the 1927 Original Construction is addressed through a system of gutters and downspouts, which are properly located, and in good to fair condition. Roof storm drainage for the 1946, 1950, and 1956 Additions is addressed through a system of roof drains and downspouts, which are properly located, and in good condition. No problems requiring attention were encountered with any roof penetrations. There are not any covered walkways attached to this structure. It was reported by district personnel, and observed, the original roof area was not removed prior to installing the current roof system. Therefore, additional tear-off costs required. Additional roof insulation required to meet LEED energy efficiency requirements.

Rating: 3 Needs Replacement

Recommendations:

ations: The roof over the overall facility requires replacement to meet Ohio School Design Manual guidelines due to condition. The roof access hatch and access ladders require replacement due to condition. 10-02-14 Update: Original assessment did not include roof replacement for the 1950 Addition. Revise to include replacing the roof on the 1950 Addition with built-up asphalt system. Provide for additional roof tear-off due to recovery roof system installed over existing roof. Provide for additional roof insulation to meet LEED energy efficiency requirements.

Asphalt Shingle and EPDM Roof Over the 1927 Original Construction

Non-Compliant Roof Ladder At the 1946 Addition

C. Ventilation / Air Conditioning

Description: The overall facility is not equipped with a central air conditioning system. Window units are provided in several Classroom locations. The ventilation system in the overall facility consists of unit ventilators, original to each addition and in fair to poor condition, providing fresh air to Classrooms, and unit ventilators and air handlers, original to each addition and in fair to poor condition, providing fresh air to other miscellaneous spaces such as the Gymnasium, Student Dining, and Media Center. Relief air venting is provided by transfer grilles to Corridors, unit ventilators, air handlers, and central relief fans. The ventilation system does not meet the Ohio Building Code 15 CFM per occupant fresh air requirement. The overall system is not compliant with Ohio Building Code and Ohio School Design Manual requirements. Dust collection systems are not required in this facility. Exhaust systems for Restrooms, Storage Rooms, Custodial Closets, Maintenance Workrooms, Kitchen Dry Food Storage, Locker Rooms, P.E. Workroom & Storage, and Art Rooms are inadequately placed, and in poor condition. The Art Program is equipped with a kiln, and the existing kiln ventilation system is inadequate. General building exhaust is included in Item A and should not be included in this line Item.

Rating: 2 Needs Repair

Recommendations: Provide an air conditioning system to meet with Ohio Building Code and Ohio School Design Manual requirements. Pricing included in Item A. Replace the existing general building exhaust system. Provide the existing Art Program the required kiln ventilation system. Delete general building exhaust.

Air Handler Unit

D. Electrical Systems

Description: The electrical system provided to the 1927 Original Construction is a 120/208 volts, 600 amp, 3 phase and 4 wire system installed in 1927, and is in poor condition. The systems in the 1946, 1950, and 1956 Additions are an extension of that found in the 1951 Original Construction. Power is provided to the school by a single City of Cuyahoga Falls owned, pole-mounted transformer located at the corner of the existing parking area, and in fair condition. The panel system, installed in 1927, with upgrades in 1999, is in fair condition, but cannot be expanded to add additional capacity. The Classrooms are not equipped with adequate electrical outlets. The typical Classroom contains four (4) general purpose outlets, zero (0) dedicated outlets for each Classroom computer, and zero (0) dedicated outlets for each Classroom sare equipped with as many as six (6) general purpose outlets, while others are equipped with as few as three (3) general purpose outlets. There are not any spaces that have no electrical outlets. The Corridors are not equipped with adequate electrical outlets for servicing. Adequate GFI protected exterior outlets are not provided around the perimeter of the building. The facility is not equipped with an emergency generator. Adequate lightning protection safeguards are not provided. Stage lighting power system including control panel, breakers, and dimmers is inadequately provided, in fair condition and does not meet OSDM requirements. The overall electrical system does not meet Ohio School Design Manual requirements in supporting the current needs of the school, and will be inadequate to meet the facility's future needs.

Rating: 3 Needs Replacement

Recommendations:

ions: The entire electrical system requires replacement to meet Ohio School Design Manual guidelines for overall capacity and Classroom capacity due to age, condition, lack of OSDM-required features, and to accommodate the addition of an air conditioning system. Provide an emergency generator, with funding included in the electrical system replacement. Provide adequate lightning protection safeguards in the overall facility, including associated grounding system, with funding included in the electrical system replacement. Provide control panel, dimmers, and breakers to support the Stage lighting system, with funding included in the electrical system replacement.

Main Electrical Distribution Panel

Pole Mounted Transformer

E. Plumbing and Fixtures

The service entrance is not equipped with a reduced pressure backflow preventer. A water treatment system is not provided, though none is Description: needed. The domestic water supply piping in the overall facility is galvanized and copper, is original to each addition, and is in fair condition. The waste piping in the overall facility is cast iron and galvanized, is original to each addition, and is in fair condition. The facility is equipped with 2 Bradford White 40 gallon natural gas water heaters, installed in 1999, and in good to fair condition. The overall facility contains 2 Large Group Restrooms for boys, 2 Large Group Restrooms for girls, 1 Locker Room Restroom for boys, 1 Locker Room Restroom for girls, 0 Locker Room Restrooms for staff, 0 Kitchen Restrooms, 1 Health Clinic Restroom, 3 Restrooms associated with Kindergarten / Pre-K Classrooms / Specialty Classrooms, and 3 Restrooms for staff. Boys' Large Group Restrooms contain 4 non-ADA floor mounted flush valve toilets, 6 non-ADA (3 wall / 3 floor) mounted (3 flush valve / 3 central flush) urinals, as well as 4 non-ADA wall mounted lavatories. Girls' Large Group Restrooms contain 9 non-ADA floor mounted flush valve toilets, as well as 4 non-ADA wall mounted lavatories. Boys' Locker Room Restrooms contain 1 non-ADA floor mounted flush valve toilet, 1 non-ADA floor mounted flush valve urinal, 1 non-ADA wall mounted lavatory, as well as 3 non-ADA showers. Girls' Locker Room Restrooms contain 2 non-ADA floor mounted flush valve toilets, 2 non-ADA wall mounted lavatories, as well as 3 non-ADA showers. Staff Restrooms contain 4 non-ADA floor mounted flush valve toilets, as well as 3 non-ADA countertop mounted lavatories. Condition of fixtures is fair to poor. The facility is equipped with 2 non-ADA drinking fountains, as well as 3 ADA electric water coolers, in fair to poor condition. Elementary Classrooms are not equipped with required lavatory mounted type drinking fountains. Special Education Classroom is not equipped with the required Restroom facilities. Kitchen is not equipped with the required Restroom facilities. Health Clinic is equipped with the required Restroom which contains 1 non-ADA floor mounted flush valve toilets, as well as 1 non-ADA countertop mounted lavatories, and fixtures are in fair to poor condition. Kindergarten / Pre-K Classrooms are equipped with Restroom facilities which contain 5 non-ADA floor mounted flush valve toilets, 1 non-ADA floor mounted flush valve urinal, as well as 3 non-ADA wall mounted lavatories, and fixtures are in fair to poor condition. Kitchen fixtures consist of two (2) triple-compartment sinks, one (1) hand sink, and one (1) dishwashing unit with built-in Hatco water heater, which are in fair condition. The Kitchen is equipped with two (2) unsatisfactory grease interceptors due to age, condition, and insufficient capacity. The Kitchen is not provided the required 140 degree hot water supply. CONTINUED

Rating: 3 Needs Replacement

Recommendations:

Idations: Replace galvanized water supply piping in the overall facility with copper piping due to age and condition. Replace sanitary waste piping in the overall facility due to age and condition. To facilitate the school's compliance with OBC and OSFC requirements, provide 16 lavatory mounted type drinking fountains. Due to age, condition, and OSFC standards, replace 18 lavatories, 26 toilets, 8 urinals, and 3 electric water coolers. See ltem 0 for replacement of fixtures related to ADA requirements. See ltem J for provisions on Kitchen related equipment. Provide the service entrance with a reduced pressure back flow preventer. Replace the Kitchen grease trap interceptors due to age, condition, and insufficient capacity. Provide the Kitchen with a water booster heater. Provide 2 additional exterior wall hydrants. Replace the existing Custodial Closet service sinks due to age and condition.

Floor Mounted Flush Valve Toilet

F. Windows

Rating:

Description: The overall facility is equipped with thermally broken aluminum frame windows with double glazed insulated glazing type window systems. The window system in the 1927 Original Construction was installed in 1982 and is good to fair condition. The window system in the 1946, 1950 and 1956 Additions was installed in 1999, and is in good condition. Window system seals are in good condition, with no air and water infiltration being experienced. Window system hardware is in good condition. The window system features surface mounted blinds and shades, which are in good to fair condition. The window system in the 1927 Original Construction is not equipped with insect screens on operable windows. The window system in the 1946, 1950 and 1956 Additions is equipped with insect screens on operable window. Which are in good condition. The window system is upped with any curtain wall systems. This facility does not feature any glass block windows. The majority of exterior doors in the overall facility are equipped with thermally broken aluminum frame sidelights and transoms with double glazed insulated glazing, in good condition. The main entry door to the 1927 Original Construction is equipped with wood frame sidelights and transom with single pane glazing, in fair condition. The school does not contain skylights. Window security grilles are not provided for the majority of ground floor windows. Security grilles are provided for two ground floor windows in the Original Building need replaced in order to meet LEED Energy Efficiency Requirements. Since windows will have integral blinds and operable portion with screen, line item for replacing screens, surface mounted blinds.

2 Needs Repair

Recommendations: Provide insect screens for operable windows in the 1927 Original Construction. Replace defective surface mounted blinds and shades as required through the overall facility. Recaulking of perimeter joints of all exterior windows in the 1927 Original Construction is addressed in Item H. Replace single pane glazing in the 1927 Original Construction main entry sidelights and transom. 06-22-18 Assessment Update: Replace windows in Original Building and delete window screen and surface mounted blinds.

Typical Windows in the 1927 Original Construction

Typical Classroom Windows in the 1950 and 1956 Additions

G. Structure: Foundation

Description: The overall facility is equipped with masonry and concrete foundation walls on concrete footings. One area of differential settlement and cracking was observed at the southwest corner of the 1946 Addition. The foundations in the overall facility are in fair condition. The District reports that there has been past leaking at the exterior stairs next to the Boiler Room in the 1927 Original Construction. A site drainage deficiency was noted at the perimeter of the 1946 Addition that is contributing to the foundation settlement. 06-22-18 Assessment Update: Settling has occurred at the southeast classroom of the 1956 Addition. A significant floor crack spans the classroom floor (north to south) and exterior brick cracking on the exterior wall.

Rating:

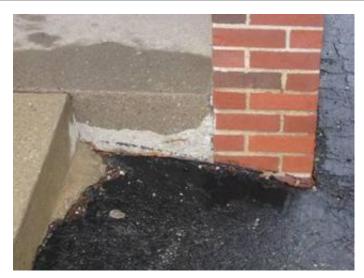

2 Needs Repair

Recommendations: Provide drainage tile system for the existing roof drains from on the west side of the 1946 Addition. Address foundation leaking issue at the exterior Boiler Room wall in the 1927 Original Construction. 10-02-14 Update: There is significant water damage and water infiltration at the foundation along the South elevation West elevation (main entry). Revise "Foundation Leaking Issue" line item quantity from 200 sf to 600 sf and cost/sf from \$50/sf to \$95/sf to excavate, provide under drains water proofing of foundation wall. 06-22-18 Assessment Update: Provide underpinning of foundation to prevent further settlement.

Location of Leaking in the 1927 Original Construction Boiler Room

Exterior Wall at Grade

H. Structure: Walls and Chimneys

Description: The overall facility has a brick veneer on a masonry bearing wall system, which displayed locations of deterioration, and is in good to fair condition. The exterior masonry does not contain control joints and none are needed as there is no indication of exterior masonry cracking or separation. The school does not contain expansion joints, and none are needed as there is no indication of exterior masonry cracking or separation. The exterior masonry has not been cleaned and sealed in recent years, and shows evidence of mortar deterioration and locations of staining. Architectural exterior accent materials consist of stone and painted wood trim which are in fair condition. Interior walls are glazed block, plaster and wood paneling and are in fair condition. Interior masonry does not contain control joints, and none are needed as there is no indication of cracking or separation. The window sills in the 1927 Original Construction are brick and are in good to fair condition. The window sills in the 1927 Original Construction are brick and are in good to fair condition. Chimneys are in fair condition and require masonry tuckpointing, cleaning and sealing. Canopies and soffits over entrances are plaster type construction, and are in good to fair condition. A loading dock has not been provided to facilitate unloading of trucks and receipt of product / supplies / food stuffs. The stone and clay tile copings at roof lines are in fair condition and require replacement. 06-22-18 Assessment Update: The faux wood gutter/cornice at the West, East and North elevations of the building is in poor condition and should be replaced.

Rating: 2 Needs Repair

-

Recommendations: Provide tuckpointing in all areas of mortar deterioration as required through the overall facility. Provide masonry repairs as required through the overall facility. Provide masonry cleaning, sealing and caulking as required through the overall facility. Prep and paint exposed steel lintels through the overall facility. Prep and paint two do cornices and trim in the 1927 Original Construction and the 1956 Additions. Repoint stone window sills in the 1946, 1950 and 1956 Additions. Repoint brick window sills in the 1927 Original Construction main entry. Replace clay tile copings as required in the 1927 Original Construction. Replace wood columns at the 1927 Original Construction main entry. Replace perimeter window sealant in the 1927 Original Construction. Provide masonry infill for unit ventilator openings in exterior walls. Prep and paint exterior plaster soffits. 10-02-14 Update: Steel Lintels rusted and deteriorated and should be replaced. Provide for lintel replacement. Wood Cornice and Trim'' line item from 1,512 If to 200 If. 06-22-18 Assessment Update: Remove faux wood gutter/cornice at the West, East and North elevations of the building and replace with new Fypon Millwork.

Masonry Condition in the 1948 Addition

Wood Column at the 1927 Original Construction Entry

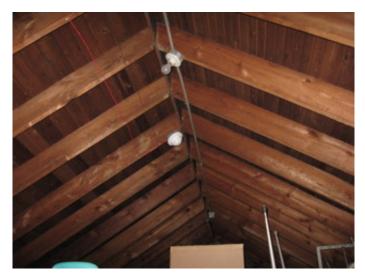

I. Structure: Floors and Roofs

Description:	The floor construction of the base floor of the overall facility is concrete slab-on-grade type construction, and is in fair condition due to cracking of the floor slab in the southwest corner of the 1946 Addition. There is a tunnel space located under the Corridors of the 1946 Addition with cast-in-place reinforced concrete type construction, and is in good condition. The floor construction of the first and second floors of the overall facility precast concrete planks with concrete topping type construction, and is in good to fair condition due to some cracks in the Corridors. Ceiling to structural deck spaces are sufficient to accommodate HVAC, electrical, and plumbing scopes of work in required renovations, except in the basement, where architectural soffits will be required. The roof construction of the 1927 Original Construction is wood deck on wood rafter type construction, and is in good condition. The roof construction of the 1946 Additions is steel deck on steel joist type construction, and is in good condition.
--------------	--

Rating: 2 Needs Repair

Recommendations: Repair cracks in the 1927 Original Construction and 1946 Addition concrete slab. Repair cracks in the 1950 and 1956 Additions elevated floor slabs. Refer to Item U for pricing of fire suppression system for wood structures. Refer to Item A for funding of architectural soffits to accommodate HVAC, electrical, and plumbing scopes of work.

Wood Roof Structure Over the 1927 Original Construction

Crack In the Floor Slab In the Southwest Classroom Of the 1946 Addition

J. General Finishes

The 1927 Original Construction features conventionally partitioned Classrooms with VAT flooring, plaster ceilings, as well as plaster wall finishes, Description: and they are in fair to poor condition. The 1927 Original Construction has Corridors with terrazzo flooring, acoustical tile ceilings, as well as plaster and painted brick wall finishes, and they are in fair condition. The 1946, 1950, and 1956 Addition features conventionally partitioned Classrooms with VAT, VCT, and carpet flooring, acoustical tile ceilings, as well as glazed block and plaster wall finishes, and they are in fair to poor condition. The 1946, 1950, and 1956 Addition has Corridors with terrazzo flooring, acoustical tile ceilings, as well as glazed block and plaster wall finishes, and they are in fair condition. The overall facility has Restrooms with terrazzo flooring, acoustical tile ceilings, as well as glazed block and plaster wall finishes, and they are in fair to poor condition. Toilet partitions are metal, and are in poor condition. Classroom casework in the overall facility is wood type construction with plastic laminate or wood tops, is adequately provided, and in poor condition. The typical Classroom contains 26 lineal feet of casework, and Classroom casework provided ranges from 16 to 32 feet. Classrooms are provided with adequate chalkboards, markerboards, and tackboards, which are in fair to poor condition. The Classroom storage cubbies and coat hooks, located in the Classrooms, are adequately provided, and in poor condition. The Art program is equipped with a kiln in fair to poor condition, and existing kiln ventilation is inadequate. The facility is equipped with wood non-louvered interior doors that are flush recessed without proper ADA hardware and clearances, and in poor condition. The Gymnasium spaces have wood flooring, acoustical tile ceilings, as well as plaster and wood panel wall finishes, and they are in fair to poor condition. Wood Gymnasium flooring has been well maintained, will accommodate no future sandings and refinishings, and is rated at an advanced stage of its product lifecycle. Gymnasium fixed stands are wood type construction in poor condition. Gymnasium basketball backboards are fixed type, and are in poor condition. The Media Center, located in the 1927 Original Construction, has carpet flooring, acoustical tile ceilings, as well as plaster wall finishes, and they are in fair condition. Student Dining, located in the 1927 Original Construction, has VAT flooring, acoustical tile ceilings, as well as plaster and glazed block wall finishes, and they are in fair to poor condition. OSDM-required fixed equipment for Stage is inadequately provided, and in poor condition. The existing Kitchen is full service, is undersized based on current enrollment, and the existing Kitchen equipment, installed in the 1950's, and is in poor condition. The Kitchen hood is in poor condition, and is not equipped with the required UL 300 compliant wet chemical fire suppression system. The required 6" overhang on all three exposed sides of the cooking equipment is not provided by the hood. Kitchen hood exhaust ductwork is not of proper construction material and/or installed as required by the OSDM and OBMC. Reach-in coolers and freezers are located within the Kitchen spaces, and are in fair to poor condition. 06-22-18 Assessment Update: Floor infill, patch, floor tile repair and wall tile repair will be required following removal of floor mounted urinals. The buildings was not constructed with exterior cavity and insulation construction. Additional insulation will be required to meet LEED Energy Efficiency requirements. Gandee and Associates EEA report reflects hard plaster containing ACM and wall build back will be required following plaster removal. The stage wood flooring should be replace along with the wood gym floor.

Rating: 3 Needs Replacement

Recommendations:

Provide complete replacement of finishes and casework due to installation of systems outlined in Items A, C, D, E, I, K, L, M, N, T, U, and due to condition. Provide for repairs to terrazzo flooring due to condition. Provide for the replacement of interior doors due to condition. Other doors are funded in Item O due to opening expansion. Provide for the replacement of Kitchen equipment due to age and condition. Provide for the replacement of the Kitchen exhaust hood due to age and condition. Provide for the replacement of toilet partitions due to condition. Provide for the replacement of toilet accessories due to condition. Provide for the replacement of Gymnasium seating due to condition. Provide for the replacement of Gymnasium wood floors due to product lifecycle. Provide for the replacement of Gymnasium basketball goals due to condition. Provide for the replacement of the RT Program kiln due to condition. Provide for the replacement of hard plaster due to work in Item T. 06-22-18 Assessment Update: Provide budget for floor infill, patch, floor tile repair and wall tile repair for removal of floor mounted urinals. Provide for replacement for stage wood flooring.

Typical Corridor Finishes in the 1927 Original Construction

Typical Corridor Finishes in the 1946 Addition

K. Interior Lighting

The typical Classrooms in the overall facility are equipped with T-8 1x4 surface mount fluorescent fixtures with single level switching. Classroom Description: fixtures are in fair condition, providing an average illumination of 41 FC, which is less than the 50 FC recommended by the OSDM. The typical Corridors in the overall facility are equipped with T-8 1x4 suspended and T-8 2x4 lay-in direct fluorescent fixtures with single level switching. Corridor fixtures are in good to fair condition, providing an average illumination of 21 FC, thus complying with the 20 FC recommended by the OSDM. The Gymnasium spaces are equipped with surface mount metal halide type lighting, in fair condition, providing an average illumination of 33 FC, which is less than the 50 FC recommended by the OSDM. The Media Center is equipped with T-8 1x4 surface mount fluorescent fixture type lighting in fair condition, providing an average illumination of 59 FC, thus complying with the 50 FC recommended by the OSDM. The Student Dining spaces are equipped with T-8 1x4 surface mount fluorescent fixture type lighting with single level switching. Student Dining fixtures are in fair condition, providing an average illumination of 45 FC, which is less than the 50 FC recommended by the OSDM. The Kitchen spaces are equipped with T-12 1x4 surface mount fluorescent fixture type lighting with single level switching. Kitchen fixtures are in fair to poor condition, providing an average illumination of 66 FC, which is less than the 75-80 FC recommended by the OSDM. The Service Areas in the overall facility are equipped with incandescent and T-12 1x4 suspended fluorescent fixture type lighting in poor condition, providing inadequate illumination. The typical Administrative spaces in the overall facility are equipped with T-8 1x4 suspended fluorescent fixture type lighting in fair condition, providing inadequate illumination based on OSDM requirements. The overall lighting systems of the facility are not compliant with Ohio School Design Manual requirements due to age, condition, inadequate lighting levels, lack of multi-level switching, the utilization of incandescent fixtures, and the utilization of T-12 fluorescent fixtures.

Rating: 3 Needs Replacement

Recommendations:

Provide complete replacement of lighting system due to age, condition, inadequate lighting levels, lack of multilevel switching, the utilization of incandescent fixtures, the utilization of T-12 fixtures), and installation of systems outlined in Items A, C, J, and U.

L. Security Systems

Description: The overall facility contains a Honeywell motion sensor type security system in fair condition. Motion detectors are inadequately provided in main entries, central gathering areas, offices, main Corridors, and spaces where 6 or more computers are located. Exterior doors are not equipped with door contacts. An automatic visitor control system is provided. Compliant color CCTV cameras are not provided at main entry areas, parking lots, central gathering areas, and main Corridors. A compliant color CCTV cameras are not provided at main entry areas, parking lots, central gathering areas, and main Corridors. A compliant computer controlled access control system integrating alarms and video signals, with appropriate UPS backup, is not provided. The system is not equipped with card / biometric readers. The security system is inadequately provided throughout, and the system is not fully compliant with Ohio School Design Manual guidelines. Existing playground fencing is not fully compliant with Ohio School Design Manual guidelines. The exterior site lighting system is equipped with surface mounted HID high pressure sodium / mercury vapor entry lights in fair condition. Pedestrian walkways are not illuminated. Parking and bus pick-up / drop off areas are not illuminated. The exterior site lighting system provides inadequate coverage. 06-22-18 Assessment Update: There main entry into the building is not secured and a security vestibule is needed to limit direct access into the building. Due to the design of the existing main entrance with the multiple stairs and small entry it will difficult to modify to achieve the security point; therefore, it's recommended modifications be provided at an alternative entry point to achieve the secure vestibule.

Rating: 3 Needs Replacement

Recommendations:

tions: Provide complete replacement of security system to meet Ohio School Design Manual guidelines. Provide complete replacement of exterior site lighting system to meet Ohio School Design Manual guidelines. Provide playground fencing to meet Ohio School Design Manual guidelines, funding included in complete replacement of security system. 06-22-18 Assessment Update: Provide for modifications on 1950 Addition Entry to provide for a security vestibule.

Surface Mounted HID High Pressure Sodium Light Fixture

M. Emergency/Egress Lighting

Description: The overall facility is equipped with an emergency egress lighting system consisting of non compliant plastic construction exit signs, as well as OSDM compliant red lettered, cast aluminum construction, and LED illuminated exit signs and the system is in fair condition. The facility is not adequately equipped with emergency egress floodlighting, and the system is in fair condition. The system is not provided with appropriate battery backup and emergency generator on separate circuits. The system is inadequately provided throughout, and does not meet Ohio School Design Manual and Ohio Building Code requirements.

Rating: 3 Needs Replacement

Recommendations: Provide complete replacement of emergency / egress lighting system to meet Ohio School Design Manual guidelines.

N. Fire Alarm

Description: The overall facility is equipped with an addressable Gamewell Flex 610 fire alarm system, installed in 1999, and in fair condition, consisting of manual pull stations, smoke detectors, and horn and strobe indicating devices. The system is automatic and is monitored by a third party. The system is not equipped with sufficient audible horns, strobe indicating devices, and smoke detectors. The system is not equipped with any flow switches, tamper switches, or heat sensors. The system thus will not support future fire suppression systems. The system is not adequately provided throughout, and does not have additional zone capabilities. The system is not fully compliant with Ohio Building Code, NFPA, and Ohio School Design Manual requirements.

Rating: 3 Needs Replacement

Recommendations: Provide complete replacement of fire alarm system to meet OBC, NFPA, and Ohio School Design Manual guidelines.

O. Handicapped Access

Description:	At the site, there is not an accessible route provided from the public right-of-way, the accessible parking areas, and from the passenger unloading zone to the main entrance of the school due to steps at the entrance. There is an accessible route connecting all or most areas of the site. The exterior entrances are ADA accessible. Access from the parking / drop-off area to the building entries is compromised by steps or steep ramps. Adequate handicap parking is provided. Exterior doors are equipped with ADA hardware. The main entry is not equipped with an ADA power assist door. Playground layout and equipment are mostly compliant, including two areas with poured-in-place rubber safety surfacing. On the interior of the building, space allowances and reach ranges are not compliant. There is an accessible route through the building which does include protruding objects. Ground and floor surfaces are compliant. Steps and stairwells do not meet all ADA requirements, and are insufficient due to handrails and space allowances at entries to steps. Elevation changes within the overall facility are facilitated by non-compliant steps at the stage in fair condition. Access to the Stage is not facilitated by a chair lift or ramp. Elevation changes within the overall facility are facilitated by four non-compliant stervells in fair condition, and seven non-compliant tetps in fair condition. Special provisions for floor level changes in this two story structure are insufficient due to lack of ramps, lifts or elevators. This multistory building does not have a compliant levator that accesses every floor. Interior doors of the overall facility are facilitated adequate clearances, and are not provided with ADA-compliant hardware. 15 ADA-compliant trials are required, and none are currently provided. No ADA-compliant showers are required or this grade level, and none are currently provided. ADA-compliant showers are required for this grade level, and none are currently provided. ADA-compliant showers are required for this are metal
--------------	--

Rating: 2 Needs Repair

Recommendations:

Provide 2 ADA-compliant power assist door openers, 1 elevator, 1 chair lift, 4 exterior ramps, 8 toilets, 8 sinks, 6 toilet partitions with toilet accessories, 18 doors and frames in the overall facility to facilitate the school's meeting of ADA requirements. Replace handrails at steps to the Stage with ADA compliant handrails. Remount 8 mirrors for ADA compliance. Enlarge and reconfigure new single ADA Toilet Rooms for the Health Clinic, 3 Staff, and 1 shared Toilet Room between the Kindergarten Classrooms, including 5 toilets, 5 sinks and 5 sets of ADA accessories. Add 2 new single ADA Toilet Room for the Special Education Classroom and Kitchen, including 2 toilets, 2 sinks, and 2 sets of ADA accessories. Toilet partitions issues are corrected in Item J. ADA compliant sink base casework in the Classrooms is corrected in Item J. For interior doors that are not being replaced under this Item, door hardware to be replaced with funding provided in Item J. Stairwells are corrected in Item U. 10-02-14 Update: Change handicapped restroom conversion allowance from \$10,000 for each restroom to \$16,761.00 for each restroom. Add Allowance of \$25,707.00 for converting space to handicapped accessible Family Restroom.

Typical Stairwell

P. Site Condition

The 7.5 acre flat site is located in a suburban residential setting with generous tree, shrub, and floral landscaping. There are no outbuildings. Description: There are no apparent problems with erosion or ponding. The site is bordered by lightly traveled city streets. A single entrance onto the site impedes proper separation of bus and other vehicular traffic, and one way bus traffic is not provided. There is a curbside bus loading and unloading zone behind the school, which is not separated from other vehicular traffic. Staff and visitor parking is facilitated by an asphalt parking lot in fair condition, containing 38 parking places, which provides adequate parking for staff members, visitors, and the disabled. The site and parking lot drainage design, consisting of sheet drainage and trench drains, provides adequate evacuation of storm water, and no problems with parking lot ponding were observed. Concrete asphalt curbs in good condition are appropriately placed. Concrete and brick sidewalks are properly sloped, are located to provide a logical flow of pedestrian traffic, and are in good condition. Trash pick-up and service drive pavement is not heavy duty and is in poor condition, and is equipped with a concrete pad area for dumpsters, which is in good condition. The exterior stairs are in poor condition and feature non-compliant handrails and guardrails. Site fencing is not provided. The play areas are separated from vehicular traffic by concrete curbing and landscaping. The playground equipment is primarily constructed of coated steel and high density plastic, is in good to fair condition. placed to provide compliant fall zones, and on a non-compliant pea gravel soft surface of sufficient and on a compliant rubber solid surface, with a basketball court being provided on an asphalt surface. The playground area is equipped with tables and benches in good condition. The athletic facilities are comprised of baseball field and a multipurpose field, and are in good condition. Site features are suitable for outdoor instruction, which is enhanced through the District's provision of benches and picnic table. Due to the proximity to the property lines there is limited room for expansion, with the exception of the south side of the site. There is also the potential to infill the existing courtyard to gain additional square footage.06-22-18 Assessment Update: Playground equipment stairs rusting and large holes forming and should be replaced.

Rating: 2 Needs Repair

Recommendations:

Provide a dedicated and separated bus loading and unloading zone on the site. Provide for replacement of exterior stair due to condition. Replace exterior handrai/guardrails due to condition. Provide for the replacement of the asphalt wear layer due to condition. Provide for the replacement of asphalt pavement at the hard surface play area. Provide additional Playground mulch as the soft surface material to allow for a sufficient depth. Provide site contingency allowances for unforeseen conditions. 10-02-14 Update: Side stairwell @ SE Corner of building (leading down to media center) needs replaced and a larger catch basin and drain installed to prevent storm water from entering the lower level of building. Add allowance to rebuild stairwell and install better storm drainage. 06-22-18 Assessment Update: Replace playground equipment.

Kitchen Grease Trap Interceptor

R. Water Supply

Description: The domestic water supply system is tied in to the city system, features 2" service and 1 1/2" water meter, and is in fair condition. The District was not able to provide water supply flow test data. The existing domestic water service appears to meet the facility's current needs. The facility is not equipped with an automated fire suppression system, and the existing water supply will not provide adequate support for a future system. The domestic water service is not equipped with a water booster pump, and none is required. The system does not provide adequate pressure and capacity for the future needs of the school.

Rating: 1 Satisfactory

Recommendations:

ations: Provide a new city water supply line of adequate capacity to support the existing needs of the facility, as well as a future automated fire suppression system. Funding provided in Item U.

S. Exterior Doors

Description: Typical exterior doors in the overall facility are hollow metal, installed on hollow metal frames, and are in fair condition. Typical exterior hollow metal doors feature no vision panels. Entrance door in the 1927 Original Construction is wood type construction, installed on wood frame, and in fair condition. Entrance doors in the 1946, 1950 and 1956 Additions are FRP type construction, installed on aluminum frames, and in good condition. The main entry door in the 1927 Original Construction features single pane glazed tempered vision panels. Entrance doors in the 1946, 1950 and 1956 Additions feature single pane glazed tempered vision panels. Entrance doors in the 1946, 1950 and 1956 additions features in the 1946, 1950 and 1956 Additions features is not panels. There are no overhead doors in the facility. 06-22-18 Assessment Update: A total of 5 exterior door leafs need replaced on Original Building.

Rating: 3 Needs Replacement

Recommendations: Replace all exterior hollow metal doors, due to poor condition. Replace exterior wood entry door in the 1927 Original Construction, due to condition. Replacement of single glazed transoms and sidelights is addressed in Item F. Replace fire door identified in item T. 06-22-18 Assessment Update: Change exterior door leaf replacement on Original Building from 2 to 5.

Wood Entry Door in the 1927 Original Construction

Hollow Metal Doors in the 1946 Addition

T. Hazardous Material

Description:

The School District did not provide an AHERA three year reinspection reports, or other documents regarding hazardous materials. An Enhanced Environmental Hazards Assessment (EEHA) will need to be conducted in order to establish abatement budgets. (Vinyl asbestos floor tile and mastic, hard plaster, and fire doors containing hazardous materials are located in the overall facility in fair to poor condition. These materials were open to observation and found to be in friable and non-friable condition with moderate damage. There are no underground storage tanks on the site. Due to the construction date, there is a potential for lead based paint. Fluorescent lighting will require special disposal.

Rating: 3 Needs Replacement

Recommendations:

tions: Remove all hazardous materials, inclusive of asbestos-containing materials in the overall facility, as noted in the attached Environmental Hazards Assessment. Provide for the testing of paint that has the potential of being lead-based. Provide for disposal of fluorescent lighting.

Fire Door in the Corridor

VAT in the Classrooms

U. Life Safety

Description: The overall facility is not equipped with an automated fire suppression system. Exit corridors are situated such that dead-end corridors are not present. The facility features four (4) interior stair towers, which are not protected by a two hour fire enclosure. The facility does not have any exterior stairways from intermediate floors. Handrails do not extend past the top and bottom stair risers as required by the Ohio Building Code. Guardrails are constructed with vertical bars with more than 4" clearance. The Kitchen hood is in poor condition, and is not equipped with the required UL 300 compliant wet chemical fire suppression system. The required 6" overhang of the cooking equipment is not provided by the hood. Kitchen hood exhaust ductwork is not of proper construction, material, and insulation and was not installed as required by the OSDM and OBCMC. The cooking equipment is not interlocked to shut down in the event of discharge of the fire suppression system. The existing water supply is provided by a tie-in to the city system, and is insufficient to meet the future fire suppression needs of the school. Rooms with a capacity greater than 50 occupants are equipped with adequate egress. 06-22-18 Assessment Update: Water meter not required for fire protection water service. A backflow preventer is required for new water service for fire protection.

Rating: 3 Needs Replacement

Recommendations:

Provide new automated fire suppression system to meet Ohio School Design Manual guidelines and to include fire protection of the wood roof structure and deck located over the overall facility. Provide increased water service of a capacity sufficient to support the fire suppression system, with funding included in fire suppression funding. Provide new emergency generator, with funding provided via complete replacement of electrical system in Item D. Provide new handrails to meet the requirements of the Ohio Building Code. Provide new handrails to meet the requirements of the Ohio Building Code. Provide fire-rated enclosure around existing stair towers. Rework existing non-compliant stair tower. Provide additional wall cabinets and fire extinguishers. Provide the new Kitchen hood with a UL 300 compliant wet chemical fire suppression system, with funding provided in Item J. Provide the interlock to de-energize cooking equipment upon discharge of the Kitchen hood fire suppression system, with funding provided in Item J. 10-02-14 Update: Existing 2" water service not sufficient to support sprinkler system. Provide new water service for fire protection. 1-1/2" water meter will need to be increased in size to meet fire protection flow requirements. Replace water meter. Code requirement to provide UL rated assembly on 1927 Original Building wood roof trusses. Add budget to provide UL rated assembly on 1927 Original Building wood roof trusses. Add budget to provide UL rated assembly on 1927 Original Building wood roof trusses. Add budget to provide UL rated assembly on 1927 Original Building wood roof trusses. Non-compliant Guardrails

Non-compliant Handrail

V. Loose Furnishings

Description:

The typical Classroom furniture is mismatched, and in generally fair to poor condition, consisting of student desks & chairs, teacher desks & chairs, desk height file cabinets, reading tables, computer workstations, bookcases, and wastebaskets. The facility's furniture and loose equipment were evaluated in item 6.17 in the CEFPI section of this report, and on a scale of 1 to 10 the overall facility received a rating of 2 due to observed conditions, and due to the fact that it lacks some of the Design Manual required elements.

Rating: 3 Needs Replacement

Recommendations: Provide for replacement of outdated or inadequate furnishings.

Typical Teacher Desk

Computer Work Stations

Facility Assessment

W. Technology

Description: The typical Classroom is equipped with one of the required four technology data ports for student use, one voice port with a digitally based phone system, one cable port and monitor, and a 2-way PA system that can be initiated only by the Main Office to meet Ohio School Design Manual requirements. The majority of the Classrooms have an Infrared Classroom Amplification Technology systems. Two Classrooms have smart boards and wall mounted projection units. The typical Classroom is not equipped with three of the required four technology data ports for student use, one data port for teacher use, and a 2-way PA system that can be initiated by either party to meet Ohio School Design Manual requirements. The facility is equipped with an outdated centralized clock system that is only used to run the school bell system. Specialized electrical / sound system requirements of Gymnasium, Stage, Student Dining, and Music spaces are inadequately provided, and in poor condition. OSDM-compliant computer network infrastructure is not provided. The facility does not contain a Media Distribution Center, and does not provide Computer Labs for use by students.

Rating: 3 Needs Replacement

Recommendations:

Provide complete replacement of technology systems to meet Ohio School Design Manual requirements.

uitability Appraisal of 1.0 The School Site for Silver_Lake_ES_June_2009_Jan_2015_EEA_June_2018_Desktop_Update		
1.0 The School Site	Points Allocated	Points
1.1 Site is large enough to meet educational needs as defined by state and local requirements	25	10
The site is 7.5 acres compared to 13 acres recommended by the OSDM.		
1.2 Site is easily accessible and conveniently located for the present and future population	20	16
The School is centrally located within the district that it serves, and is easily accessible.		
1.3 Location is removed from undesirable business, industry, traffic, and natural hazards	10	8
The site is adjacent to residential uses, and there are no undesirable features adjacent to the School site.		
1.4 Site is well landscaped and developed to meet educational needs	10	8
The site is generously landscaped with mature shade trees, ornamental trees, and shrubs which define the property and empha where mowing is required do not exceed 3:1 slope.	asize the building entrance. Law	vn areas
1.5 ES Well equipped playgrounds are separated from streets and parking areas MS Well equipped athletic and intermural areas are separated from streets and parking HS Well equipped athletic areas are adequate with sufficient solid-surface parking	10	8
Playground areas consist of coated steel and high density plastic type play equipment, which is in good to fair condition, and is surface, which is not an approved soft surface material. Play equipment is ADA accessible, and includes an accessible route to equipart playgrounds are separate for vehicular traffic by curbing and sidewalks.		
1.6 Topography is varied enough to provide desirable appearance and without steep inclines	5	4
The site is gently sloped to provide positive drainage across the site. A flat area is provided to accommodate buildings, perimet areas, outdoor play areas, and physical education spaces, and is desirable.	ter walks, vehicular circulation, p	parking
1.7 Site has stable, well drained soil free of erosion	5	4
Soils appear to be stable and well drained, and no erosion was observed.		
1.8 Site is suitable for special instructional needs, e.g., outdoor learning	5	4
The site has been developed to accommodate outdoor learning, including benches and picnic tables to facilitate instruction.		
1.9 Pedestrian services include adequate sidewalk with designated crosswalks, curb cuts, and correct slopes	5	4
Sidewalks are adequately provided to accommodate safe pedestrian circulation including designated crosswalks, curb cuts, and	d correct slopes.	
1.10 ES/MS Sufficient on-site, solid surface parking for faculty and staff is provided HS Sufficient on-site, solid surface parking is provided for faculty, students, staff and community	5	4
Adequate parking is provided for faculty, staff, and community parking, and is located on asphalt pavement in fair condition.

ability Appraisal of 2.0 Structural and Mechanical Features for Silver_Lake_ES_June_2009_Jan_2015_EEA_June_2018_Desktop_Up	Points Allocated	Points
Structural		
2.1 Structure meets all barrier-free requirements both externally and internally	15	9
Entire building is not ADA-compliant.		
2.2 Roofs appear sound, have positive drainage, and are weather tight	15	8
The roofs over the entire building require replacement.		
2.3 Foundations are strong and stable with no observable cracks	10	8
Foundations are in fair condition with an observable area of settlement.		
2.4 Exterior and interior walls have sufficient expansion joints and are free of deterioration	10	8
Exterior and interior walls are in good to fair condition. Some masonry repair work is required and all masonry surfaces require clea	aning and sealing.	
2.5 Entrances and exits are located so as to permit efficient student traffic flow	10	8
Exits are properly located to allow safe egress from the building.		
2.6 Building "envelope" generally provides for energy conservation (see criteria)	10	ŧ
Building envelope meets minimum energy conservation requirements.		
2.7 Structure is free of friable asbestos and toxic materials	10	
The building is assumed to contain asbestos and other hazardous materials.		
2.8 Interior walls permit sufficient flexibility for a variety of class sizes	10	4
Interior walls throughout the facility are fixed walls and are not flexible.		
Mechanical/Electrical	Points Allocated	Points
2.9 Adequate light sources are well maintained, and properly placed and are not subject to overheating	15	4
Light sources are improperly placed and provide inadequate lighting in some areas. Fixtures are poorly maintained in some areas. ubject to overheating.	Light fixtures do not appe	ar to be
2.10 Internal water supply is adequate with sufficient pressure to meet health and safety requirements	15	e
Internal water supply will not support a future fire suppression system, but appears to be adequate for current requirements.		
2.11 Each teaching/learning area has adequate convenient wall outlets, phone and computer cabling for technology applications	15	4
Classrooms have an inadequate number of outlets and data jacks for technology applications.		
2.12 Electrical controls are safely protected with disconnect switches easily accessible	10	2
Disconnect switches are not adequately provided to allow for safe servicing of equipment.		
2.13 Drinking fountains are adequate in number and placement, and are properly maintained including provisions for the disabled	10	e
Drinking fountains are adequate in number and placement, and meet ADA requirements. Drinking fountains are not properly mainte	ained.	
2.14 Number and size of restrooms meet requirements	10	ε
The number and size of Restrooms meet requirements.		
2.15 Drainage systems are properly maintained and meet requirements	10	2

and are in fair condition.

2.16 Fire alarms, smoke detectors, and sprinkler systems are properly maintained and meet requirements	10	2
The fire alarm system does not meet requirements. Smoke detectors are inadequately provided. The facility is not sprinkled.		
2.17 Intercommunication system consists of a central unit that allows dependable two-way communication between the office and instructional areas	10	4
The central intercommunication system provides unreliable two-way communication between the Administration area and all teaching areas, can or the Main Office, and is outdated. Equipment such as speakers, are in fair condition. Telephone system is used as an alternate method of communication v		V
2.18 Exterior water supply is sufficient and available for normal usage	5	2
Exterior wall hydrants are inadequately provided around the exterior of the facility.		
TOTAL - 2.0 Structural and Mechanical Features	200	97

Suitability Appraisal of 3.0 Plant Maintainability for Silver_Lake_ES_June_2009_Jan_2015_EEA_June_2018_Desktop_Update

3.0 Plant Maintainability	Points Allocated	Points
3.1 Windows, doors, and walls are of material and finish requiring minimum maintenance	15	12
Exterior materials and finishes for doors, windows and walls are durable and require minimal maintenance.		
3.2 Floor surfaces throughout the building require minimum care	15	9
Flooring throughout the facility consists of VCT, VAT, wood, terrazzo, and carpet, which is somewhat well maintained throughout the facility	1.	
3.3 Ceilings and walls throughout the building, including service areas, are easily cleaned and resistant to stain	10	6
Acoustical tile ceilings and plaster walls are not easily cleaned or resistant to stain. Glazed block is easily cleaned and resistant to stain.		
3.4 Built-in equipment is designed and constructed for ease of maintenance	10	4
Casework is wood type construction that is original to the building, and is in poor condition.		
3.5 Finishes and hardware, with compatible keying system, are of durable quality	10	6
Door hardware varies throughout the facility, does not meet ADA requirements, and keying systems are worn.		
3.6 Restroom fixtures are wall mounted and of quality finish	10	2
Fixtures are floor and wall mounted and are of fair to poor quality.		
3.7 Adequate custodial storage space with water and drain is accessible throughout the building	10	8
Custodial storage space is adequately located throughout the facility, including provisions for water and drains.		
3.8 Adequate electrical outlets and power, to permit routine cleaning, are available in every area	10	2
Electrical outlets are inadequately provided in Corridors and do not allow for convenient routine cleaning.		
3.9 Outdoor light fixtures, electrical outlets, equipment, and other fixtures are accessible for repair and replacement	10	4
Outdoor light fixtures are inadequately provided, but are accessible for repair and replacement. Electrical outlets are inadequately provided facility.	around the exterior o	of the

Suitability Appraisal of 4.0 Building Safety and Security for Silver_Lake_ES_June_2009_Jan_2015_EEA_June_2018_Desktop_Update		
4.0 Building Safety and Security	Points Allocated	Points
Site Safety		
4.1 Student loading areas are segregated from other vehicular traffic and pedestrian walkways	15	6
Student loading occurs in the street, and is not separated from other vehicular traffic.		
4.2 Walkways, both on and offsite, are available for safety of pedestrians	10	8
Walkways are adequately provided both on and off-site for pedestrian safety.		
4.3 Access streets have sufficient signals and signs to permit safe entrance to and exit from school area	5	4
School signs and signals are located as required on adjacent access streets.		
4.4 Vehicular entrances and exits permit safe traffic flow	5	2
Student loading occurs in the street, and is not separated from other vehicular traffic.		
4.5 ES Playground equipment is free from hazard MS Location and types of intramural equipment are free from hazard HS Athletic field equipment is properly located and is free from hazard	5	3

Playground equipment consists of plastic coated steel and high density plastic type equipment in good to fair condition, appears to be free from hazard, and is not located on an approved soft surface material.

Building Safety	Points Allocated	Points
4.6 The heating unit(s) is located away from student occupied areas	20	10
Heating boilers are located in rooms that are not accessible by students. Unit ventilators and radiators are located in the Classrooms	and other learning areas	
4.7 Multi-story buildings have at least two stairways for student egress	15	9
The building does have 4 stairways, which are not enclosed, and are not ADA and OBC compliant.		
4.8 Exterior doors open outward and are equipped with panic hardware	10	8
Exterior doors open in the direction of travel and are equipped with panic hardware.		
4.9 Emergency lighting is provided throughout the entire building with exit signs on separate electrical circuits	10	2
Exit signs are on separate circuits but are inadequately provided. The facility is inadequately equipped with emergency egress light fix with an emergency generator.	xtures. The facility is not	equipped
4.10 Classroom doors are recessed and open outward	10	6
Classroom doors are recessed from the Corridor in the Additions and open outward without proper ADA clearances, but do not imped	le traffic flow in the Corri	dors.
4.11 Building security systems are provided to assure uninterrupted operation of the educational program	10	2
Security systems are inadequately provided and are in fair condition.		
4.12 Flooring (including ramps and stairways) is maintained in a non-slip condition	5	4
VCT, VAT, Terrazzo, Carpet, and wood parquet flooring have been well maintained throughout the facility.		
4.13 Stair risers (interior and exterior) do not exceed 6 1/2 inches and range in number from 3 - 16	5	3
Stair treads and risers are properly designed and meet requirements. Stair risers exceed exceed 7 inches permitted by the OBC at th	e South exterior door.	
4.14 Glass is properly located and protected with wire or safety material to prevent accidental student injury	5	3
There is no glass in the interior door systems.		
4.15 Fixed Projections in the traffic areas do not extend more than eight inches from the corridor wall	5	4

Drinking fountains and electric water coolers are semi-recessed and flush mounted, extend more than eight inches from the Corridor wall, but do not impede traffic flow in the Corridors.

4.16 Traffic areas terminate at an exit or a stairway leading to an egress	5	5
Exits are properly located to allow safe egress from the building.		
Emergency Safety	Points Allocated	Points
4.17 Adequate fire safety equipment is properly located	15	2
The facility is not sprinkled. Fire alarm devices are not provided adequately. Fire extinguishers are inadequately provided.		
4.18 There are at least two independent exits from any point in the building	15	8
There are no dead-end Corridors in the building.		
4.19 Fire-resistant materials are used throughout the structure	15	9
The exterior walls are a masonry load bearing system. Wood rafters are located at roof of the 1927 Original Construction.		
4.20 Automatic and manual emergency alarm system with a distinctive sound and flashing light is provided	15	4
The fire alarm is equipped with automatic actuation devices and is not provided with adequate visual indicating devices.		
TOTAL - 4.0 Building Safety and Security	200	102

		Bottom of pag
tability Appraisal of 5.0 Educational Adequacy for Silver_Lake_ES_June_2009_Jan_2015_EEA_June_2018_Desktop_Update		
5.0 Educational Adequacy	Points Allocated	Points
Academic Learning Space		
5.1 Size of academic learning areas meets desirable standards	25	15
The average Classroom in the 1927 Original Construction is 580 SF compared to 900 SF required by the OSDM. The average Addition is 792 SF compared to 900 SF required by the OSDM.	Classroom in the 1946, 1950), and 1956
5.2 Classroom space permits arrangements for small group activity	15	9
Undersized Classrooms do not allow sufficient space for effective small group activities.		
5.3 Location of academic learning areas is near related educational activities and away from disruptive noise	10	8
The Gymnasium and Music program are properly isolated from the academic learning areas to reduce distractions.		
5.4 Personal space in the classroom away from group instruction allows privacy time for individual students	10	4
Undersized Classrooms do not permit privacy time for individual students.		
5.5 Storage for student materials is adequate	10	4
Coat hooks and shelving, located in the Classroom, are inadequately provided for student storage.		
5.6 Storage for teacher materials is adequate	10	8
Casework is adequately provided for storage of teacher materials.		
Special Learning Space	Points Allocated	Points
5.7 Size of special learning area(s) meets standards	15	9
The Special Education Classroom is 755 SF compared to 900 SF recommended in the OSDM. Special Education Classrooms	are undersized compared to	standards.
5.8 Design of specialized learning area(s) is compatible with instructional need	10	4
Special Education spaces are not adequately provided to meet instructional needs.		
5.9 Library/Resource/Media Center provides appropriate and attractive space	10	8
The Media Center is 913 SF compared to 879 SF recommended in the OSDM.		
5.10 Gymnasium (or covered P.E. area) adequately serves physical education instruction	5	2
The Gymnasium is 2,690 SF compared to 3,500-5,000 SF recommended in the OSDM.		
5.11 ES Pre-kindergarten and kindergarten space is appropriate for age of students and nature of instruction MS/HS Science program is provided sufficient space and equipment	10	4
Kindergarten spaces are undersized, and do not provide adequate instruction space.		
5.12 Music Program is provided adequate sound treated space	5	2
The Music Room is 424 SF compared to 1,800-3,000 recommended in the OSDM. Music instruction is provided in a standard O	Classroom without any sound	l treatment.
5.13 Space for art is appropriate for special instruction, supplies, and equipment	5	2
The Art Room is 1,088 SF compared to 1,200 SF recommended in the OSDM. The Art Room is undersized and does not provisupplies and equipment.	de sufficient space for storag	e of
School Facility Appraisal	Points Allocated	Points

	1 Onto 7 modated	i onto
5.14 Space for technology education permits use of state-of-the-art equipment	5	0

The facility is not provided with Computer Labs for student use.

5.15 Space for small groups and remedial instruction is provided adjacent to classrooms	5	2
No spaces have been provided adjacent to Classrooms for small groups or remedial instruction.		
5.16 Storage for student and teacher material is adequate	5	3
Storage for students has not been adequately provided throughout the facility. Casework has been adequately provided for storag	e of teacher materials.	
Support Space	Points Allocated	Points
5.17 Teacher's lounge and work areas reflect teachers as professionals	10	8
The Teacher's Lounge is 917 SF compared to 450-900 SF, for 8-24 staff, recommended in the OSDM.		
5.18 Cafeteria/Kitchen is attractive with sufficient space for seating/dining, delivery, storage, and food preparation	10	4
The Kitchen space is 772 SF compared to 879 SF recommended in the OSDM. The Student Dining space is 1,317 SF compared OSDM. The Student Dining space has limited visual appeal with limited seating capacity.	to 3,000 SF recommende	d in the
5.19 Administrative offices provided are consistent in appearance and function with the maturity of the students served	5	2
Administrative Offices are not adequately provided for Elementary School students.		
5.20 Counselor's office insures privacy and sufficient storage	5	1
There is no dedicated Counselor's Office in this facility.		
5.21 Clinic is near administrative offices and is equipped to meet requirements	5	1
The Clinic is 126 SF compared to 370 SF recommended in the OSDM.		
5.22 Suitable reception space is available for students, teachers, and visitors	5	2
Reception space consists of approximately 143 SF compared to 200-400 SF recommended by the OSDM.		
5.23 Administrative personnel are provided sufficient work space and privacy	5	1
The Administrative area consists of approximately 598 SF for the principal, assistant principal, secretary, Conference Room, Stora compared to 2,600 SF recommended by the OSDM.	age, Copy Room, and Res	stroom,

Suitability Appraisal of 6.0 Environment for Education for Silver_Lake_ES_June_2009_Jan_2015_EEA_June_2018_Desktop_Update		
6.0 Environment for Education	Points Allocated	Points
Exterior Environment		
6.1 Overall design is aesthetically pleasing to age of students	15	12
The building is a historical design with standard detailing, which is aesthetically acceptable.		
6.2 Site and building are well landscaped	10	8
The site is generously landscaped with mature shade trees, ornamental trees, and shrubs which define the property and emphasis where mowing is required do not exceed 3:1 slope.	ze the building entrance.	Lawn areas
6.3 Exterior noise and poor environment do not disrupt learning	10	8
The site is adjacent to residential uses, and there are no undesirable features adjacent to the school site.		
6.4 Entrances and walkways are sheltered from sun and inclement weather	10	8
The main entrance to the School is partially sheltered.		
6.5 Building materials provide attractive color and texture	5	4
Exterior building materials consist of brick and stone, which provides an attractive color and texture.		
Interior Environment	Points Allocated	Points
6.6 Color schemes, building materials, and decor provide an impetus to learning	20	16
The color palette is comprised of neutral hues with accent colors of more saturated hues. School colors are reflected in the athleti and materials give the building some unity and a sense of consistency, which enhances the learning environment.	c areas. The use of repea	ated colors
6.7 Year around comfortable temperature and humidity are provided throughout the building	15	2
The facility is not air conditioned to provide year-round temperature and humidity control.		
6.8 Ventilating system provides adequate quiet circulation of clean air and meets 15cfm VBC requirement	15	6
The ventilating systems do not provide an adequate quantity of ventilation air to the spaces. Ventilation systems introduce minima areas.	I noise into the teaching a	and learning
6.9 Lighting system provides proper intensity, diffusion, and distribution of illumination	15	4
The lighting system does not provide proper intensity in some areas. Location of lighting fixtures provides uneven distribution of ill adequately provided by the light fixture lenses in some areas.	umination. Diffusion of illu	umination is
6.10 Drinking fountains and restroom facilities are conveniently located	15	12
Drinking fountains and Restroom facilities are conveniently located.		
6.11 Communication among students is enhanced by commons area(s) for socialization	10	8
There are locations for students to gather in the Student Dining and Gymnasium, as well as gathering areas in the outdoor play a	eas.	
6.12 Traffic flow is aided by appropriate foyers and corridors	10	8
Corridors and Foyers are adequately designed for efficient traffic flow.		
6.13 Areas for students to interact are suitable to the age group	10	8
There are locations for students to gather in the Student Dining and Gymnasium, as well as gathering areas in the outdoor play a	eas.	
6.14 Large group areas are designed for effective management of students	10	7
The Gymnasium and Student Dining space is adequately designed to manage large groups of students, but the Student Dining is	in the Basement.	
6.15 Acoustical treatment of ceilings, walls, and floors provides effective sound control	10	4

Limited consideration has been given to acoustical treatment of Classrooms and Corridors.		
6.16 Window design contributes to a pleasant environment	10	8
The windows are well designed and contribute to a pleasant environment.		
6.17 Furniture and equipment provide a pleasing atmosphere	10	2
Classroom furniture is mismatched and in fair to poor condition.

Co	ounty:	Summit
Sc	chool District:	Cuyahoga Falls City

Sustainable Sites

Construction process can have a harmful effect on local ecology, especially when buildings are build on productive agricultural, wildlife or open areas. Several measures can be take however to prevent the impact on undeveloped lands or to improve previously contaminated sites. Appropriate location reduces the need for private transportation and helps to prevent an increase in air pollution. Developing buildings in urban areas and on brownfield sites instead of greenfield locations has economical and environmental benefits. Controlling stormwater runoff and erosion can prevent the worsening of water quality in receiving bodies of water and the impact on aquatic life. Once the building is constructed, it's important to decrease heat island effects and reduce the light pollution on the site.

(source: LEED Reference Guide, 2001:9)

Water Efficiency

In the US ca. 340 billion gallons of fresh water are withdrawn daily from surface sources, 65% of which is discharged later after use. Water is also withdrawn from underground aquifers The excessive usage of water results in the current water deficit, estimated at 3,700 billion gallons. Water efficiency measures in commercial buildings can reduce water usage by at least 30%. Low-flow fixtures, sensors or using non potable water for landscape irrigation, toilet flushing and building systems are just some of available strategies. Not only do they result in environmental savings, but also bring about financial benefits, related to lower water use fees, lower sewage volumes to treat and energy use reductions.

(source: LEED Reference Guide, 2001:65)

Energy & Atmosphere

Buildings in the US account for more than 30% of the total energy use and for approximately 60% of electricity. 75% of energy is derived from the burning of fossil fuels, which releases CO2 into the Atmosphere and contributes to global warming. Moreover, coal fired electric utilities release nitrogen oxides and sulfur dioxide, where the former contribute to smog and the latter to acid rain. Other types of energy production are not less harmful. Burning of natural gas produces nitrogen oxides and greenhouse gases as well, nuclear power creates nuclear wastes, while hydroelectric generating plants disrupt natural water flows. Luckily there are several practices that can reduce energy consumption and are environmentally and economically beneficial. Not only will they reduce the air pollution and mitigate global warming thanks to being less dependent on power plants, but also they will reduce operational costs and will quickly pay back. In order to make the most of those practices, it's important to adopt a holistic approach to the building's energy load and integrate different energy saving strategies.

(source: LEED Reference Guide, 2001:93)

Material & Resources

The steps related to process building materials, such as extraction, processing and transportation are not environmentally natural, as they pollute the air, water and use natural resources. Construction and demolition wastes account for 40% of the solid waste stream in the US. Reusing existing documents is one of the best strategies to reduce solid wastes volumes and prevents then from ending up at landfills. It also reduces habitat disturbance and minimizes the need for the surrounding infrastructure. While using new materials one should take into account different material sources. Salvaged materials provide savings on material costs, recycled content material minimizes waste products and local materials reduce the environmental impact of transportation. Finally, using rapidly renewable materials and certified wood decreases the consumption of natural resources. Recycling and reusing construction waste is another strategy to be taken into consideration in sustainable design.

(source: LEED Reference Guide, 2001:167)

Indoor Environmental Quality

As we spend a big majority of our time indoors, the emphasis should be put on optimal indoor environmental quality strategies while (re)designing a building. Otherwise, a poor IEQ will have adverse effects on occupants' health, productivity and quality of life. IEQ strategies such as ventilation effectiveness and control of contaminants or a building flush-out prior to occupancy can reduce potential liability, increase the market value of the building but can also result in a significantly higher productivity (16%). Other strategies involve automatic sensors and controls, introducing fresh air to the building or providing lots of daylighting views.

(source: LEED Reference Guide, 2001:215)

Innovation & Design Process

This category is aimed at recognizing projects that implemented innovative building features and sustainable building knowledge, and whose strategy or measure results exceeded those which are required by the LEED Rating System. Expertise in sustainable design is the key element of the innovative design and construction process. (source: LEED Reference Guide, 2001:271)

Justification for Allocation of Points

Building Name and Level:	Silver Lake Elementary
--------------------------	------------------------

K-5

Building features that clearly exceed criteria:

1.			
2.			
3.			
4.			
5.			

6.

Building features that are non-existent or very inadequate:

1.	The building does not meet ADA requirements.
2.	The building does not contain a fire suppression system.
3.	The building is reported to contain asbestos and other hazardous materials.
4.	
5.	

6.

Γ	B. Removal Of Underground Storage Tanks

B. Removal Of Underground Storage	Tanks					None Reported
Tank No.	Location	Age	P	roduct Stored	Size	Est.Rem.Cost
1. (Sum of Lines 1-0)			Total Cost For	r Removal Of Underground S	torage Tanks	\$0.00
C. Lead-Based Paint (LBP) - Renovation	n Only				L Additio	n Constructed after 1980
 Estimated Cost For Abatement Contrac 	tor to Perform Lead Mock-	Ups				\$0.00
2. Special Engineering Fees for LBP Mock	-Ups					\$0.00
3. (Sum of Lines 1-2)				Total Cost for Lead-Based P	aint Mock-Ups	\$0.00
D. Fluorescent Lamps & Ballasts Recyc	ling/Incineration					Not Applicable
Area Of Building Addition		Square Feet v	/Fluorescent Lamp	os & Ballasts	Unit Cost	Total Cost
1. 1364	1364				\$	0.10 \$136.40
E. Other Environmental Hazards/Remar	ks					None Reported
		Description				Cost Estimate
1. Costs for lead-based paint mock-ups ar	e included in assessment	for 1927 (Orio	inal Construction).			\$0.00
2. See Bulk Sample Record Nos. 1, 8, & 1	0 for sampling results in th	is addition.	· · · · · · · · · · · · · · · · · · ·			\$0.00
3. (Sum of Lines 1-2) Tota	Cost for Other Environ	mental Hazar	ds - Renovation			\$0.00
	Cost for Other Environ	mental Hazar	ds - Demolition			\$0.00
F. Environmental Hazards Assessment	Cost Estimate Summarie	s				
1. A35, B1, C3, D1, and E3				Total Cost for Env. Hazard	s Work - Renova	ation \$4,918.40
2. A36, B1, D1, and E4				Total Cost for Env. Hazard	ds Work - Demol	ition \$4,918.40

* INSPECTION ASSUMPTIONS for Reported/Assumed Asbestos-Free Materials (Rep/Asm AFM):

- Unless reported otherwise by the District, materials installed after 1980 are assumed to be asbestos-free. a.
- Unless reported otherwise by the District, small quantities (less than 1,000 square feet) of the following materials are assumed to be asbestos free: hard plaster, acoustical plaster and gypsum board systems; acoustical panels and tiles; fireproofing; 12"x12" floor tile and mastic. b.
- c. Unless reported otherwise by the District, all roofing materials are assumed to be asbestos-free.

B. Removal Of Underground Storage Tanks						None Reported
Tank No.	Location	Age	P	Product Stored	Size	Est.Rem.Cost
1. (Sum of Lines 1-0)		Total Cost For Removal Of Underground Storage Tanks				
						Constructed after 1980
1. Estimated Cost For Abatement Contractor to Perform Lead Mock-Ups						\$0.00
2. Special Engineering Fees for LBP Mock-Ups						\$0.00
3. (Sum of Lines 1-2) Total Cost for Lead-Based Paint Mock-Ups						\$0.00
D. Fluorescent Lamps & Ballasts Recycling/Incineration						Not Applicable Total Cost
Area Of Building Addition		Square Feet w/Fluorescent Lamps & Ballasts Unit Cost				
1. 7564 7564 \$0.10).10 \$756.40
E. Other Environmental Hazards/Remarks						None Reported
Description						Cost Estimate
1. Costs for lead-based paint mock-ups are included in assessment for 1927 (Original Construction).						\$0.00
2. See Bulk Sample Record Nos. 1, 2, 7, & 10 for sampling results in this addition.						\$0.00
3. (Sum of Lines 1-2) Total Cost for Other Environmental Hazards - Renovation						\$0.00
4. (Sum of Lines 1-2) Total Cost for Other Environmental Hazards - Demolition						\$0.00
F. Environmental Hazards Assessment Cost Estimate Summaries						
1. A35, B1, C3, D1, and E3				Total Cost for Env. Hazards		• /
2. A36, B1, D1, and E4 Total Cost for Env. Hazards Work - Demolition						n \$22,056.40

* INSPECTION ASSUMPTIONS for Reported/Assumed Asbestos-Free Materials (Rep/Asm AFM):

a. Unless reported otherwise by the District, materials installed after 1980 are assumed to be asbestos-free.

Unless reported otherwise by the District, small quantities (less than 1,000 square feet) of the following materials are assumed to be asbestos free: hard plaster, acoustical plaster and gypsum board systems; acoustical panels and tiles; fireproofing; 12"x12" floor tile and mastic.

c. Unless reported otherwise by the District, all roofing materials are assumed to be asbestos-free.
